

“Converting your paper medical records is a natural pre-cursor to EMR system adoption...”

Key Benefits

- Cost Savings
- HIPPA Compliance
- Increased Security
- Disaster Recovery
- Reclaim Space
- Ease of Use

emrBridge

PRE-EMR SOLUTION

Medical practices are faced with an overwhelming amount of business change with the new legislative mandates:

- **American Recovery and Reinvestment Act (ARRA) of 2009**
- **Health Information Technology for Economic and Clinical Health Act**

It is essential that healthcare providers take a practical approach to meet these required changes to save time, money, and avoid potential risks.

How does this affect my practice?

Whether you are a physician or an office manager, you've got some big decisions to make.

You've probably been hearing a lot about the benefits and potential risks of Electronic Medical Record (EMR) systems.

If you've done some preliminary research, you know that complete EMR solutions are expensive and take a long time to fully implement. An EMR system is what you eventually need, but how you get there can be the difference between implementing a successful tool or a costly failure for your practice.

Where do we begin?

No matter where you are on the continuum of implementing a full-blown EMR system, consider that migrating paper records and information into an electronic format and establishing the processes to support such an environment is a proactive step that you can and should take now.

Converting your paper medical records now will ease the transition to a full EMR system when the time is right. This electronic conversion represents a natural pre-cursor to EMR system adoption and a perfect initial step for capitalizing on the incentives of the HITECH Act.

Key Features

- Hosted solution
- Web based interface
- Full-text retrieval
- File Tracking
- Full Audit Trail
- Full Reporting

Begin Preparing for the Transition Now

Higher government incentives are being offered to early adopting healthcare providers. Many healthcare providers are viewing the HITECH Act as a trigger for improving their technology and proactively seeking ways to accelerate the transition to electronic records/data. As you assess the implications of adopting an EMR system into your practice, there are numerous factors to consider, despite the early adoption incentives.

An EMR system is just another piece of technology: The result of poor planning or rushed decision making has the high potential of producing bad results and the system has the potential to become another major capital investment that doesn't provide as much value as anticipated. Stories in the marketplace abound from healthcare providers regarding bad EMR system implementations. The lesson: don't jump in too fast. Take the proper time needed to effectively plan and prepare so that costly and frustrating mistakes are avoided.

Next Steps

So, where do you go from here? Take the first step towards EMR system adoption by converting paper-based medical records to electronic via emrBridge, our world class pre-EMR solution. emrBridge easily and securely turns hard copy medical record information into digital documents that can be assessed, distributed or shared. There's no more hunting, searching or waiting for information. With our solution user interface, you can access medical records from any computer; allowing users to go to one place for information so that they have what they need, when they need it.

At iBridge, we understand how daunting this type of change can be. That's why we have tried to make it as easy as possible for you to make the right determination of next steps. We can help by coming to your office for a free unbiased assessment. Here's how the process works:

1. No Obligation Onsite Assessment
2. Demonstration
3. Pre-EMR Readiness
4. Conversion
5. On Demand use
